

Heatmap showing Log odds ratio for various bacterial taxa across two groups: Deceased (purple) and Recovered (light blue). The color scale ranges from -1.5 (green) to 1.5 (red).

Deceased (purple)
Recovered (light blue)

Log odds ratio

-1.5

Taxa (from top to bottom):

- Prevotella* sp. oral taxon 299
- Serratia grimesii*
- Pseudomonas yamanorum*
- Streptococcus pseudopneumoniae*
- Caldicellulosiruptor kristjanssonii*
- Lactobacillus salivarius*
- Corynebacterium singulare*
- Prevotella scopos*
- Corynebacterium segmentosum*
- Prevotella melaninogenica*
- Streptococcus pneumoniae_mitis*
- Streptococcus gwangjuense*
- Neisseria subflava*
- Streptococcus* sp. I_G2
- Streptococcus* sp. P16
- Streptococcus* sp. T16_D4
- Capnocytophaga gingivalis*
- Streptococcus oralis*
- Schaalia odontolytica*
- Streptococcus infantis*
- Streptococcus cristatus*
- Streptococcus australis*
- Streptococcus* sp. FDAARGOS_192
- Streptococcus gordonii*
- Streptococcus* sp. A12
- Streptococcus salivarius*
- Actinomyces pacaensis*
- Streptococcus sanguinis*
- Streptococcus parasanguinis*
